

SURGEON EXPERIENCES WITH XENIA

"The XENIA Lenticule is a ground-breaking treatment which can help Keratoconus and Post Lasik Ectasia patients. Early results have been very promising with very happy patients."

Mr B Ilango MBBS DO FRCS FRCOphth Cert LRS
Group Medical Director: Optimax/Ultralase Clinics UK
Royal College Certified Laser & Multifocal Lens
Implant Specialist, Wolverhampton Eye Infirmary

"For me, the XENIA procedure has vast advantages over DALK. Implanting XENIA is so much easier because it is a quick, sutureless out-patient procedure with no general anaesthesia. It provides my patients with superior corneal regularity, rapid visual rehabilitation and fewer follow-ups. Therefore, XENIA is an excellent alternative to performing DALK surgery in patients with advanced keratoconus."

Ahmed Elmassry MD, PhD
